

A Brief Explanation for the non Dowser

Comprehension of the structure of the universe requires a theory of quantum gravity. Attempting to link quantum physics with general relativity is one current approach. Many researchers, including the author, believes that the solution lies not just in physics, but involves consciousness and cognitive neuroscience together with understanding the nature and perception of information. (For example, see Bibliography and Further Reading *Reference x*). As dowsing involves all the latter factors it has proved to be a powerful and relevant research tool. This paper combines these latter factors in a non-orthodox approach linked by geometry.

Non dowers have difficulty in comprehending what dowers feel, sense, or visualise. Although atoms or electricity cannot be seen, touched, smelt, tasted or heard by the normal human senses, they are physical and can be detected by **physical** equipment and meters. Dowsing, on the other hand, involves the mind and **consciousness** – not matter and the physical. At present there are no meters to measure consciousness, so it is necessary to use the mind's perception and its interaction with the body's senses.

As will be elaborated later, sight is probably a good analogy to the dowser's perception. Sight is a model formed in the brain in which the observer believes that he or she is "seeing directly" what is being looked at. Dowsing is a similar model in the brain.

Dowsing involves the mind interacting with its environment in the widest sense via consciously specifying intent and visualising what information is being sought. *References 1 and 2* provide an introduction. Dowsing has many applications, but in this paper it is purely academic, and relates to "earth energies" and naturally occurring "subtle energy" fields, the nature of which are not yet understood, but are currently being researched. The simplest form of dowsing involves information requests of a binary nature; basically a "yes" or "no" answer to a question. An example of academic dowsing intent could be "give me a yes" when entering the boundary of the aura of an object, or the subtle energy beam produced by the interaction of two or more bodies.

These "fields" emanate not only from the earth's spin on its axis, its topological or subterranean features, but as demonstrated with an appropriate yardstick and protocol, are even influenced by electromagnetism, gravity, fundamental geometry as well as cosmic sources. Hence the relevance of dowsing to researching the structure of the universe and the Information Field. These fields usually comprise lines, spirals, patterns, and "flows" which can be detected by dowsing.

Dowsing and associated intuitive techniques fall into several different categories. Some gifted people are able to visualise "earth energies" or "subtle energies" without the use of devices. Other device-less dowers feel a positive sensation in their mind's eye, throat, solar plexus, or fingers. Most dowers need rods, a pendulum, or other devices to amplify the dowsing sensation emanating in their mind. The majority of the research detailed here was undertaken by device-less dowsing, supplemented with angle rods because the author feels they react quickly, respond accurately to boundaries, indicate the direction of flow of the subtle energies or spirals being dowsed, and are easy to use on-site, even in the wind or rain.
